

CD DVD-ROM Generator 2.00 SONY Rebuild Tutorial Setup Free

On this month's CD-ROM...

UFO

Discover the mysteries of the universe in this multimedia extravaganza of the supernatural – you'll never sleep soundly again!

MechWarrior 2

Huge leviathan robots battling it out in a blasted wasteland. The best big-robots-fighting-each-other game around.

MoneyBox

A splendid all-purpose personal finance manager – you've no excuse for being overdrawn now.

Tyrian

Ridiculously fast, adrenaline-saturated, shoot-everything-that-moves game from Epic MegaGames.

Worms

A strange and thoroughly violent mix of *Lemmings* and *Battleships*. Possibly. Run the game and you can decide.

3D Pro

A module from the commercial program *VR Workshop* – a 3D modelling package.

Tekwar

Based on the series of novels by William Shatner – you have to run around shooting things, yet avoid being shot at yourself.

Capitalism

Programmed by a 22-year-old genius, this corporate strategy game invites you to dabble with stocks, bonds, building construction and much much more. And we thought *SimCity* was cool.

Logical Decisions

A demo of this powerful decision analysis program – experiment with its features.

Entomorph

Following one of the most sumptuous intro sequences ever, this is a top-down, elves and dwarfs adventure with large monsters, combat and puzzle solving.

Calamus for Win 95

A fully featured Windows 95 DTP system.

Witchaven

IntraCorp's second 3D adventure is a swords and sorcery, track and slash affair. Think you're good at *Doom*? Let's see if your keyboard prowess can save you when you're armed with only a dagger!

In the First Degree

Can you prove Murder One? Check out this courtroom drama of epic proportions.

Music demos galore

Over a dozen demos of music programs to complement our music feature.

Mortal Kombat 3

Quite possibly the greatest 2D beat-'em-up ever (and now a major Hollywood movie). *Mortal Kombat* now has a "3" after it. There are more moves, more characters and more gruesome fatalities. Not for the faint-hearted.

Shareware Showcase

Stacks of shareware, including some word processors, games and a Tiny Elvis who comments on everything on your desktop.

Abuse

A fast-paced and frantic shoot-'em-up from someone who works for id Software – yes, the id Software...

Panic in the Park

Part adventure and part logic puzzle, the park in question is an amusement park which someone feels the need to panic in.

xtreme4 player Essentially if you change a device to the default of A2 then it will use the menu and search / sort to see if its a sony player and it will change its output to that preset.To change it back to A1 just select the device again. NOTE: If you don't see a menu with the standard options you can right click the device name and select open.. my limited experience and research show this is the way to go, but I hope this info helps.EDIT: I just checked and I had an update last night. I also have the new versions of the media software. That should have made no difference. I'm stumped and feel useless. Hi JCQ, I just looked at some help files and they said you can go to Device Manager and the select Sony CMR-SX523 and it will be default to A2. I tried this and it seemed to work. I have not been able to replicate your issue. Let me know if you want me to try some other settings. A2 is another way of saying A1 and the menus use A2 as the standard. You can see the menu by hitting the enter key after selecting the device.It seems that the updates that came down last night messed something up, so the standard way to set it back to the A1 settings is to go to the Sony CMR-SX523 device in the device manager, and select the Settings tab, then go to the Interfaces tab, and select the output device. You'll then see the menus with all the options for playing. I have Sony sx523 player. It was set to A2 as default. I installed the updater of media creator 4.11. It downloaded. Then I started the application. It asked for reboot. I did. Now my CMR-SX523 is set to A1 as default. Seems like the update left my player messed up.In modern motor vehicles, there is an ever increasing need to reduce fuel consumption. It is therefore customary to control the engine operation in such a way that as far as possible the engine is switched off when the motor vehicle is stationary. This is in particular the case when the vehicle is stopped at a red traffic light. In such a case, there is no longer the need to carry out traction slip control, for example, so that the relevant functionality of the wheel slip control device is switched off. Furthermore, it is not necessary
